Summerhouses, Gazebos, Pergolas, Bridges and Arbours are some of the bespoke structures designed and built by Norton Garden Structures. They are only built to order, and each is hand crafted to meet your requirements.

The structures are built in timber from renewable sources, Western Red Cedar from Canada, Iroko from Africa and European Oak. These timbers are chosen for a combination of their appearance, durability and strength. Roofs, where applicable, can be finished in shingles, tiles, lead or copper. Structures can either be finished in a stain or left to weather over time.

Designs can either be based on previous commissions, or developed from a clients requirements. In addition to the examples in this brochure others can be found on the website.

Should you wish to consider having a structure designed and built to meet your requirements, the first step, after an initial discussion, will be to visit the proposed site, discuss the type and style of structure, so that an outline proposal can be developed, which will cover.

Draft Design, Specification, Outline Schedule and Price.

If this is acceptable the proposal will be refined before proceeding to the design and build of your structure. The majority of the work will be carried out in the workshops, the structure will be built and assembled and then taken apart for delivery, and during this phase you will be welcome to visit the workshop to see the structure in the making. When nearly completed a date will be agreed with you for delivery. Installation will take on average about 4 days, dependant upon the size of the structure. When completed you will be asked to inspect the structure to ensure that it is finished to your satisfaction.

As each structure is individually designed and built the price will depend upon specification and location. The prices shown below, which include delivery and installation, for the structures in this brochure will provide an indication.

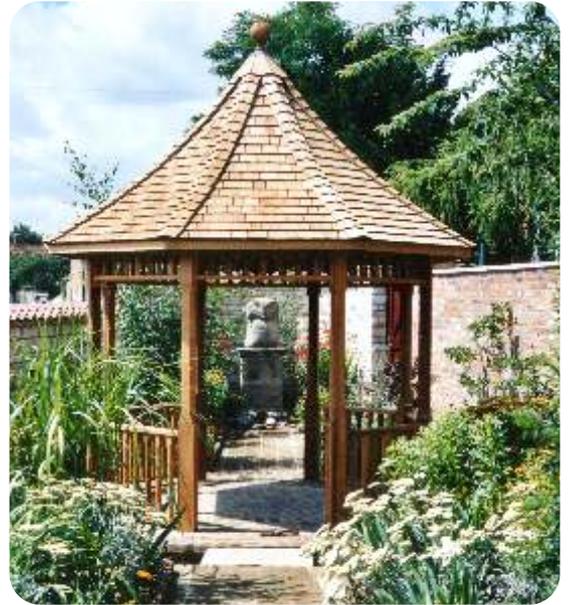

Summerhouse - 3 meter diameter (shown on front cover)	£17,400
Summerhouse - 3.5 meter diameter	£21,450
Summerhouse - square	£10,500
Octagonal Gazebo	£11,500
Arbour	£15,400
Bridge - 4 meter span	£5,500

BESPOKE STRUCTURES

These are examples of the type of bespoke structures built by Norton Garden Structures

A 2.7 meter square Summerhouse

A 3 meter octagonal Gazebo

A 3 meter square trellis Arbour with built in side benches. Made in Iroko, a durable hardwood.

A series of arches

A 3.5 meter octagonal Summerhouse

OCTAGONAL OAK PLANTERS

These octagonal oak planters are made in solid seasoned European Oak and are suitable for use in both the garden and conservatories, although their use should be specified at time of ordering.

The planters are available in several versions as follows;

- All eight panels can be finished in oak.
- One or more of the panels can be finished in pre-patinated zinc, which is a medium grey with a matt finish.
- One or more of the panels can be finished with a piece of individual Art Glass. Two examples of this are shown in the pictures. These are unique pieces of art and whilst the style and colours can be replicated, exact copies cannot. We would be pleased to discuss glass designs with you to meet your specific requirements.

They are fitted with a waterproof lining which can be removed and replaced with a standard plant container of the appropriate size.

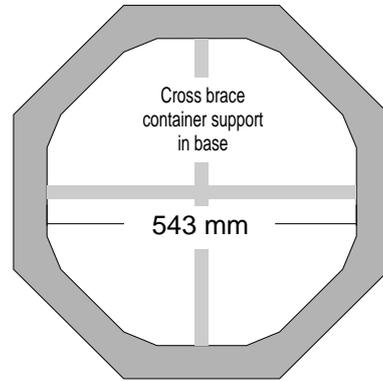

There are two sizes of this planter as shown in the drawings below. Other sizes can be made but are subject to a minimum order quantity of four.

PRICES

SIZE ONE	Any combination of Oak and Zinc	£600 plus delivery
	Additional cost per glass panel	£100
SIZE TWO	Any combination of Oak and Zinc	£750 plus delivery
	Additional cost per glass panel	£100
